Ladder to Leadership: Developing the Next Generation of Community Health & Healthcare Leaders

CHALLENGE

Many nonprofit agencies that provide community health services are facing challenges: potential gaps in leadership, workforce shifts caused by external forces, and a need for creative, bold strategies to maintain quality care and services with limited resources. This leadership deficit is one of the biggest issues facing these organizations. The Robert Wood Johnson Foundation (RWJF), the nation’s largest philanthropy devoted exclusively to improving health and healthcare, wanted to take steps to address this problem.

RWJF wanted a customized program that would target emerging leaders of nonprofits and government agencies in efforts to improve health and healthcare in vulnerable communities across the U.S.

“[The Robert Wood Johnson] Foundation has a 40-year history of supporting the development of ‘human capital,’ but we have supported little on increasing the leadership capacity of health-related nonprofits at the community level. We saw this as a gap in our portfolio, as the nonprofit level is where a lot of change happens.”

Sallie George, RWJF Program Officer
**SOLUTION**

The Robert Wood Johnson Foundation awarded a $4 million grant over 4 years to the Center for Creative Leadership (CCL)® to design and manage a new program, Ladder to Leadership: Developing the Next Generation of Community Healthcare Leaders (LTL). CCL developed a 16-month leadership development curriculum for 219 early-to-mid-career professionals, focusing on developing leadership skills related to bringing about organizational change; adapting innovations from other fields; creating more client-focused services; and working across internal and external organizational boundaries.

The program promoted cross-organization collaboration and encouraged innovation and community visibility to tackle health and healthcare issues more effectively. A total of 8 communities were chosen for participation based on poverty levels, the size of immigrant and minority populations, readiness of organizations in the communities to collaborate, and the potential for impact.

The cohorts included professionals who represented a diverse group of health and healthcare nonprofits serving a variety of needs. Also represented were organizations providing family planning, treatment for mental illness and addiction, independent living support for older adults, and resources for victims of abuse.

**Key Program Objectives:**

- Develop leadership skills among emerging leaders in health-related nonprofit industries, and increase visibility for higher level leadership roles.
- Increase effective collaborations and joint implementation of activities between community-based organizations.
- Increase peer support among Fellows.
- Encourage innovative and effective approaches to health and health-related challenges.

The comprehensive, 16-month LTL program was comprised of proven methods for leadership development, including 360-degree assessments; interactive and experiential learning sessions; and one-on-one coaching opportunities. A key component of the training was action learning, where Fellows formed small teams to create projects to address a healthcare issue in their community. The action learning process provided a laboratory for the Fellows to practice their leadership skills and to develop new ideas for addressing health-related challenges.

“Through the program’s curriculum, we hoped [participants] would gain more confidence in their ability to lead regardless of their formal position, be able to think more strategically, learn to collaborate effectively so they would be able to take on additional leadership roles in their communities, and tackle tough issues,” said Sallie George, RWJF Program Officer.

**RESULTS**

LTL generated results that were real, enduring, and powerful. A survey of Fellows indicated improvement in all areas of individual effectiveness assessed at the conclusion of the program. Similarly, the people who worked closely with the Fellows also reported significant improvement in their leadership abilities.

A year after the completion of the 16-month program, there was evidence that the impact was sustained. Fellows reported greater job responsibilities in their organizations – 29% had received a promotion, and another 37% had taken on additional duties. While the primary focus of the program was on individual leadership behaviors, there was also evidence of LTL’s impact on communities.

**PARTNER WITH US**

We understand how community-led and community-based initiatives can help build a foundation for real change and greater transformation. We can partner with your organization to create customized leadership solutions that allow you to expand your impact and the meaningful work you bring to the world.
